Agenda

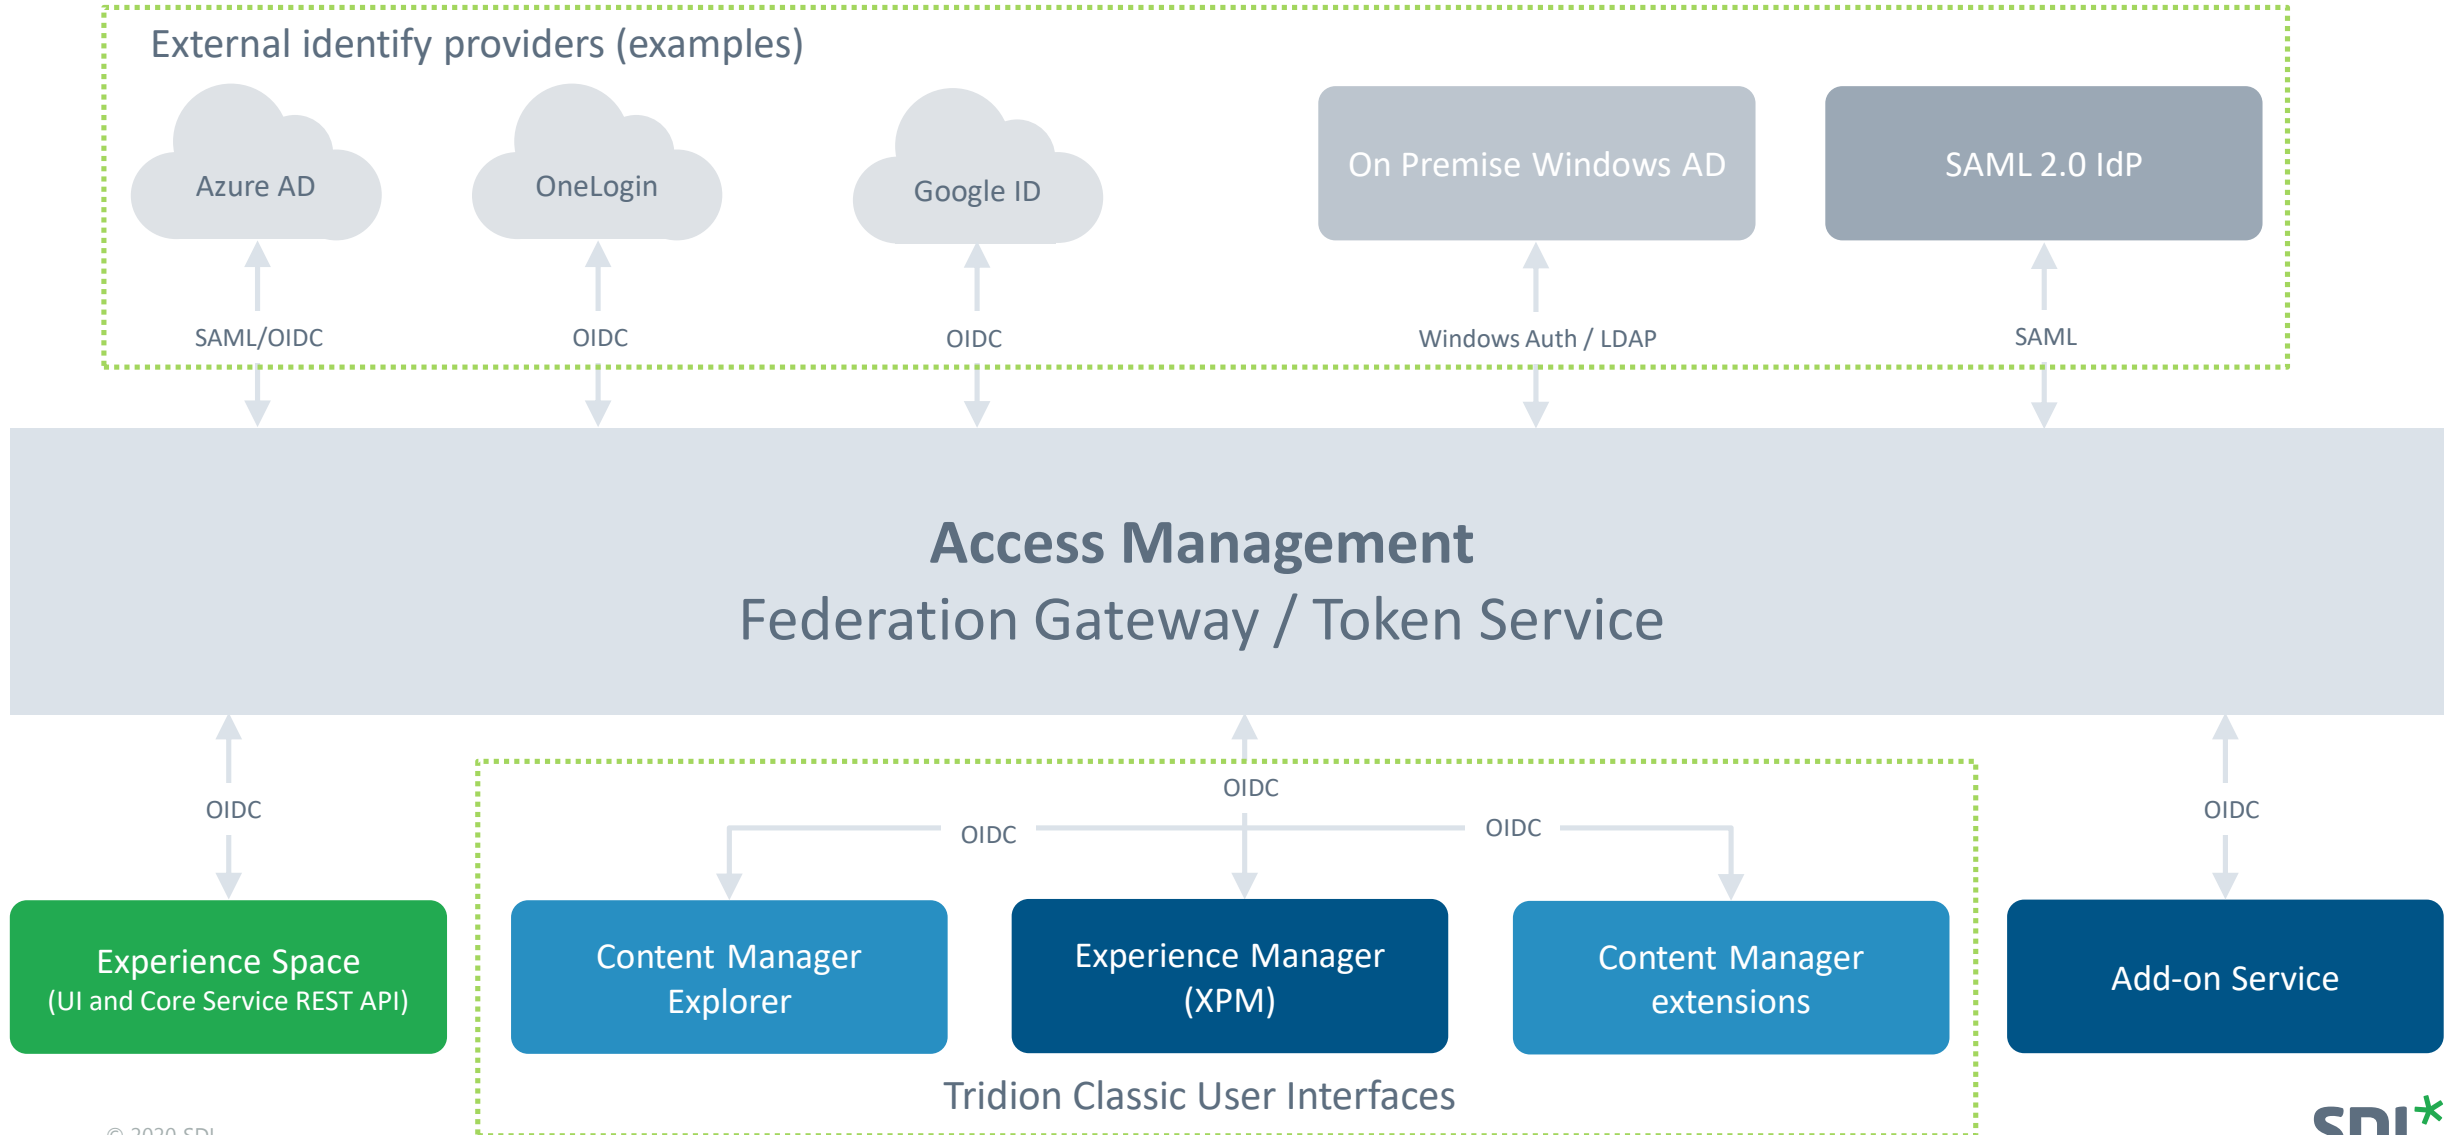

- Introduction
- Architecture
- Benefits
- Access Management API
- Demo

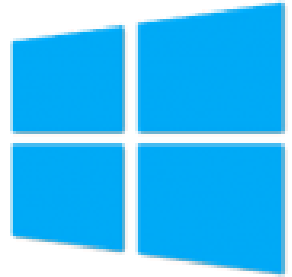

- Access Management simplifies the implementation of SSO by using a single authentication protocol while still supporting the use of various protocols by individual applications and services.
- Access Management Tasks
 - Create and maintain connections to external identity providers.
 - Configure authentication for Tridion Sites applications.
 - Manage client credentials for applications, end-users, and service accounts.

Access Management architecture

Microsoft

Active Directory

Google

Benefits

- Unified single sign-on.
- User interface for managing system access
- Simplified configuration of external identity providers
- Tridion service is not impacted by external identity provider changes
- Adding protocols means only adding it to SDL Tridion Access Management

Access Management supported Identity provider types

- SAML 2.0
- Open ID Connect
- Windows Authentication (Only in IIS)
- LDAP

Access Management API

- Use the Access Management API if you want to interact with Access Management programmatically rather than through Access Management user interface.
- Access Management Provide the API definition in the OpenAPI JSON format
- For reference documentation on the Access Management API, go <http://localhost:84/access-management/api/api-docs>

Swagger API documentation

<http://localhost:84/access-management/api/api-docs>

The screenshot shows the Swagger UI in a web browser. The browser's address bar displays the URL `localhost:84/access-management/api/api-docs/index.html`. The Swagger UI header includes the Swagger logo and a dropdown menu labeled "Select a definition" with "Access Management API V1" selected. The main content area features the title "Access Management API" with "v1" and "OAS3" badges, a description of the API's purpose, and a "Servers" section with a dropdown set to "/access-management". Below this, the "ApiResources" section lists two GET endpoints: `/api/v1/ApiResources` and `/api/v1/ApiResources/{id}`. The "Applications" section lists three endpoints: two GET endpoints (`/api/v1/Applications` and `/api/v1/Applications/{id}`) and one PUT endpoint (`/api/v1/Applications/{id}`).

Access Management API's for Automation

AddOn Service clientid and clientSecret creation

- /access-management/api/v1/ServiceAccounts/2
- /access-management/api/v1/ServiceAccounts/2/generateClientSecret

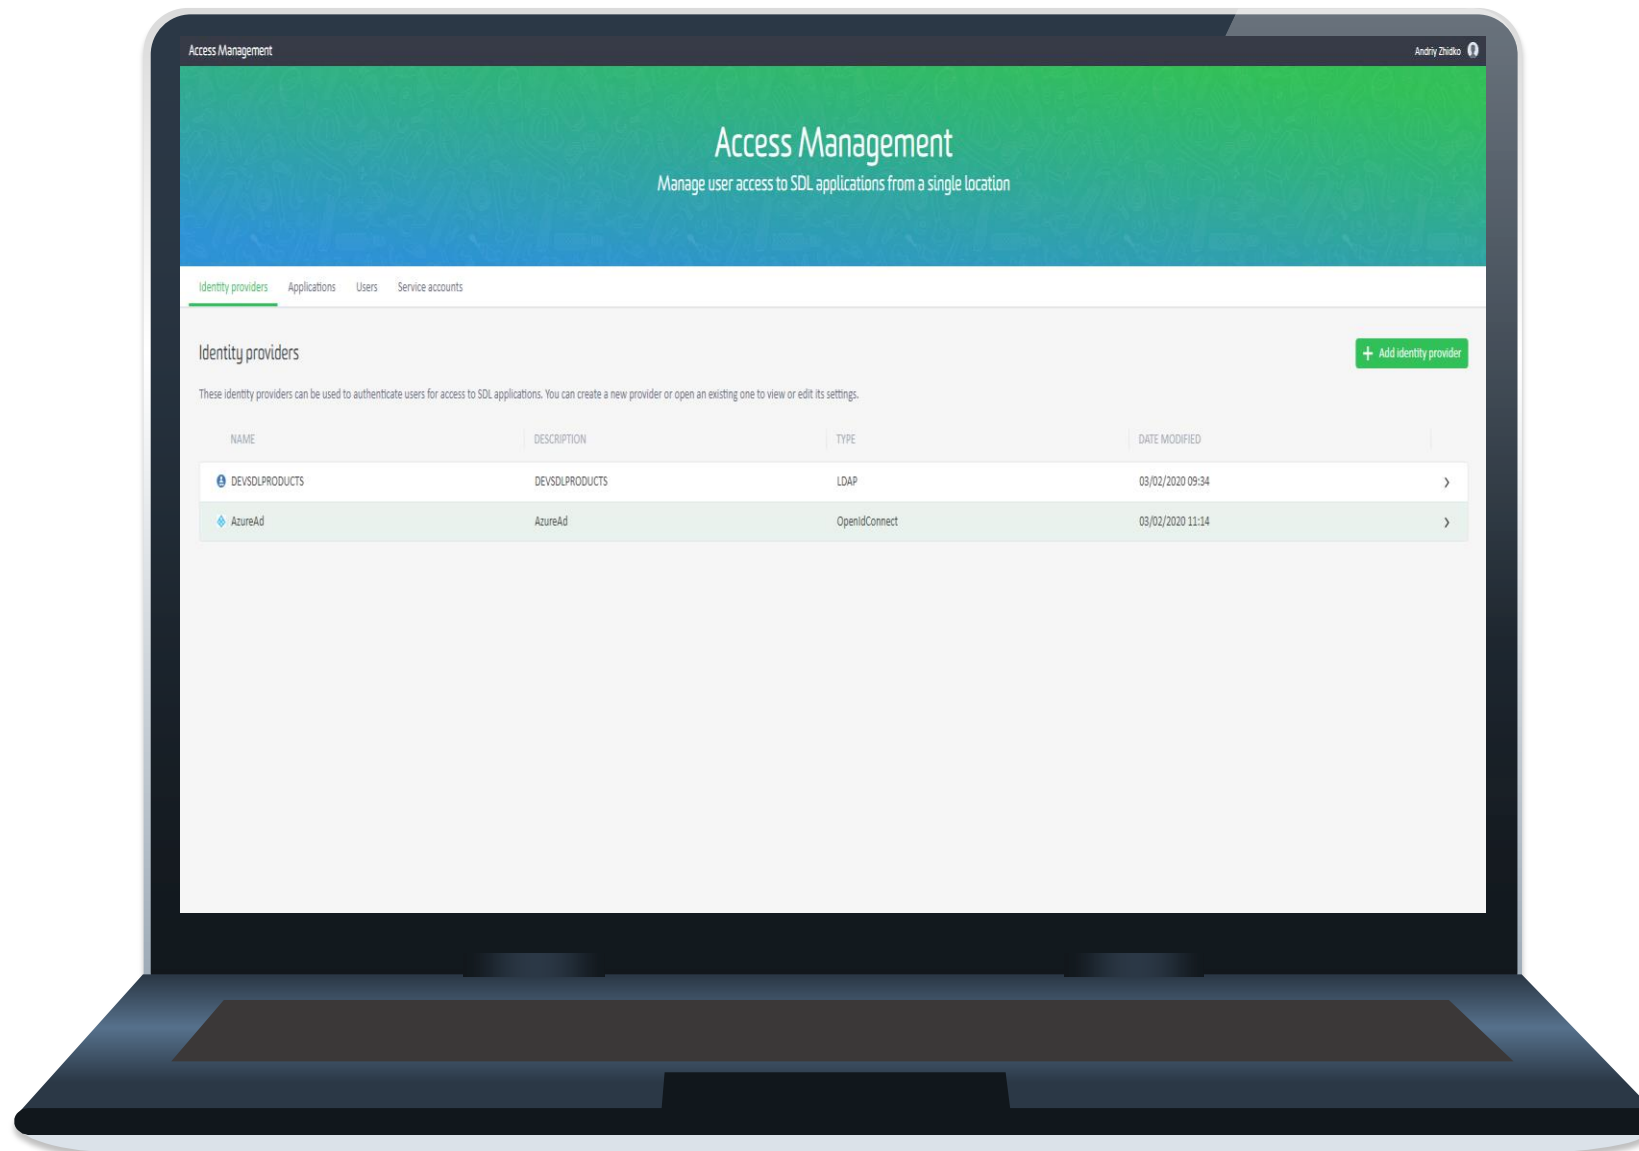

RedirectUrls Update for Both Classic UI and Experience Space

- /access-management/api/v1/Applications/3
- /access-management/api/v1/Applications/2

Identity Provider creation

- /access-management/api/v1/IdentityProviders

Demo

Access Management Installation automation script

w Volume (D:) > _Install > TXS-DEMO

| Name | Date modified | Type | Size |
|--|--------------------|-------------------|-------|
|  20201208_111130.log | 12/8/2020 11:12 AM | Text Document | 4 KB |
|  AccessManagement-Service-Install.ps1 | 12/8/2020 11:22 AM | Windows PowerS... | 12 KB |
|  idp-provider.json | 12/4/2020 1:05 PM | JSON File | 2 KB |
|  idp-provider-sample.json | 12/7/2020 3:14 PM | JSON File | 2 KB |
|  Install-Options.ps1 | 12/8/2020 10:47 AM | Windows PowerS... | 1 KB |

Pre-requisites

- Any Database version that is supported by Content Manager and Content Delivery
- Any Microsoft Windows server operating system that is supported for Content Manager server or Content Delivery server
- .NET Core and ASP.NET Core host bundles version 3.1

Access Management Installation automation script

w Volume (D:) > _Install > TXS-DEMO

| Name | Date modified | Type | Size |
|--------------------------------------|--------------------|-------------------|-------|
| 20201208_111130.log | 12/8/2020 11:12 AM | Text Document | 4 KB |
| AccessManagement-Service-Install.ps1 | 12/8/2020 11:22 AM | Windows PowerS... | 12 KB |
| idp-provider.json | 12/4/2020 1:05 PM | JSON File | 2 KB |
| idp-provider-sample.json | 12/7/2020 3:14 PM | JSON File | 2 KB |
| Install-Options.ps1 | 12/8/2020 10:47 AM | Windows PowerS... | 1 KB |

`.\AccessManagement-Service-Install.ps1 -TCMInstallerPath D:_Install\TridionSites95 -InstallationDir "D:\TXS2020-DEMO\Access Management" -CertThumbprint "4af0b42497e5988df2235b65ede11742e503fec" -SkipDBCreation`

One Script to deploy Access Management in one go, no more manual configuration
This will create the following

- Database
- Export PFX Certificate
- Install service and generate Client Id and client secrets and configure Idp provider
